Napa Technology Introduces WineStation® Intelligent Dispensing System to Maximize Wine Revenues and Profits.

SANTA CLARA, Calif., (April 2, 2007) – Napa Technology successfully launched WineStation® Intelligent Dispensing System earlier this month at the 2007 Golf Industry Show in Anaheim, California and the 2007 Las Vegas Nightclub & Bar Expo in Las Vegas Nevada.

WineStation® is the world's first automated measured dispensing and preservation solution which combines business intelligence, style, ease of installation and use, simplicity of maintenance and a patent pending hygienic Clean-Pour™ dispensing technology into a family of appliances.

WineStation® has been specifically designed for bar, restaurant and retail operations to increase revenues; controls costs and maximize profits in serving wines by the glass and bottle.

“WineStation® is about more than just preservation, it was created to increase the profitability for our customers” said Nick Moezidis, Managing Director at Napa Technology.

“Our unique solution eliminates the problems of wine spoilage, over-pouring and out right theft associated with selling wines by the glass or bottle. In addition, our customers can create new revenues from the sale of higher priced wines, staffed or self-serve wine tasting programs and paired food and wine menu specials.”

“Each WineStation® features the AccuServe™ management suite. This intelligent dispensing software puts the owner or operator in control of what wines are served, precise portion and price control, management reporting and access card issuance for staff and customer

-more-

use” described Jeffrey Brooks, Managing Director at Napa Technology.

In addition, the WineStation comes complete with the patented Clean-Pour System’s dispensing head.

The Clean-Pour dispensing head used in combination with an inert gas (either Argon or Nitrogen) hygienically assures the taste, bouquet and complexity the wine maker intended every time for 60 days or more.

“A unique difference between WineStation® by Napa Technology and previous wine preservation systems on the market is that the WineStation does not use long hoses to deliver the wine” said Morris Taradalsky, head of Engineering at Napa Technology. “We have eliminated the need for purging the system with foreign cleaning agents by creating the patented Clean-Pour™ dispensing system which eliminates the messy disasters usually associated with other units previously on the market “.
